MAKIR VOLCY

Forward Deployed Engineer — Agentic AI & Multi-Agent Systems Architecture

Agentic Framework Design • Multi-Agent Orchestration • Enterprise AI Deployment • Python & Cloud ML

Montreal, Canada | +1 (514) 602-5411 | volcy7@gmail.com LinkedIn: linkedin.com/in/makirvolcy | YouTube: youtube.com/@MakirXBT | Available: Remote / Hybrid

---

PROFESSIONAL SUMMARY

Forward Deployed Engineer and Agentic AI Architect with hands-on expertise designing, building, and deploying production multi-agent systems that solve complex enterprise business problems across financial services, energy infrastructure, and technology verticals. Builder of autonomous agent ecosystems where multiple specialized AI agents collaborate dynamically — combining language reasoning, domain-specific capabilities, and real-world tool integration to deliver measurable business outcomes. Deep proficiency in Python, LangChain, RAG systems, vector databases, context-aware prompt engineering, and cloud-native deployment. Track record converting ambiguous business challenges into technical hypotheses and delivering production-grade agentic solutions at scale. Founded two companies deploying AI-native operations across North America, West Africa, and Europe. Bilingual (English/French) with working Spanish. Canadian citizen, Montreal-based.

CORE COMPETENCIES

Agentic AI & Multi-Agent Systems Multi-Agent Architecture Design, Agentic Mesh Ecosystems, Autonomous Agent Orchestration (ReAct, Plan-and-Execute), LangChain, LangGraph, AutoGen, Hugging Face, Tool/API Integration, Emergent Agent Collaboration, Agent Behavior Debugging

Generative AI & LLM Engineering LLM Integration (Claude, GPT, Gemini), Retrieval-Augmented Generation (RAG), Context-Aware Prompt Engineering, Fine-Tuning Strategies, Vector Databases, Embedding Models, Inference Optimization, Safety & Ethical Guardrails

Cloud Platforms & Infrastructure AWS, GCP, Azure (ML Services), Docker, Linux/Ubuntu, VPS Deployment (Hetzner, DigitalOcean), CI/CD Pipelines, Microservices Architecture, Git, MLOps, Production Monitoring & Health Checks

Programming & Data Engineering Python, JavaScript, TypeScript, SQL, REST APIs, Web Scraping, Shell Scripting, Data Analysis, Automation Pipelines, Data Governance, Data Migration & Integration

Enterprise Delivery & Consulting Business-to-Technical Translation, AI Readiness Assessments, AI Transformation Roadmaps, Stakeholder Presentations, Workshop Facilitation, Team Mentoring, Cross-Functional Collaboration, Change Management

Languages English (Native) | French (Native/Bilingual) | Spanish (Working Proficiency)

PROFESSIONAL EXPERIENCE

Founder & Senior AI Consultant — Agentic AI Systems

Coldstorm AI • Montreal, Canada (Remote) • January 2024 – Present

AI consulting practice architecting and deploying production agentic AI systems, multi-agent frameworks, and intelligent business automation for enterprise and SMB clients.

- **Architected and deployed a production multi-agent ecosystem (OpenClaw) where 5+ specialized AI agents collaborate dynamically**, combining language reasoning, behavioral capabilities, and domain-specific tool integration to autonomously execute content creation, market intelligence, investor relations, and operational monitoring — operating 24/7 on containerized infrastructure.
- **Designed agentic framework architectures using LangChain, Claude API, and custom orchestration layers**, enabling autonomous problem-solving through ReAct and Plan-and-Execute patterns with real-world tool integration (APIs, databases, web services, CRM systems).
- **Converted complex, ambiguous business challenges into technical hypotheses and delivered production solutions** across 5 enterprise clients — conducting AI readiness assessments, identifying automation opportunities, and translating business objectives into agentic system specifications with measurable success criteria and ROI projections.
- **Developed a proprietary agent design methodology centered on experiential identity architectures** rather than procedural instruction sets, achieving significantly higher agent autonomy, adaptive learning, and emergent collaboration capabilities compared to conventional approaches.
- **Built reusable agentic frameworks enabling consistent delivery at scale**, including standardized evaluation harnesses measuring task completion accuracy, safety compliance, response latency, and autonomous decision quality — establishing repeatable deployment standards across engagements.
- **Implemented RAG pipelines with vector database retrieval, context-aware prompt engineering, and tool/function calling** for production chatbots, AI voice agents, and intelligent receptionist systems — handling lead qualification, scheduling, and customer communication integrated with client infrastructure.
- **Engineered VOLT — an autonomous AI trading agent** for prediction markets, implementing multi-step reasoning chains, signal analysis, position management, risk controls, execution automation, and ethical guardrails using Python and LLM-powered decision frameworks.
- **Facilitated AI strategy workshops and executive presentations** translating complex agentic AI capabilities into actionable business strategy, mentoring client teams on AI adoption and system architecture — demonstrating consulting and thought leadership capabilities.
- **Deployed all agentic systems on cloud-native infrastructure** using Docker containers, automated health monitoring, cron scheduling, and CI/CD pipelines — managing full lifecycle from development through production with data security and governance protocols.

Founder & CEO — AI-Native Infrastructure Operations

NRG Bloom Inc. • Montreal / Nigeria (Remote) • 2023 – Present

- **Built and deployed AI-native operational systems** with multi-agent automation for content production, investor communication, supply chain monitoring, and cross-border operations management — demonstrating agentic AI at the infrastructure layer.
- **Designed a hybrid compute orchestration AI engine** dynamically routing workloads between Bitcoin mining and AI inference based on real-time energy pricing and demand signals — a production example of autonomous agent decision-making with real-world constraints.
- **Architected $82M+ in financial models** using Python for investor presentations, including sensitivity analysis, scenario modeling, and capital deployment optimization — converting business requirements into data-driven solutions.
- **Orchestrated distributed international operations across Nigeria, Kenya, and Colombia**, developing expertise in cross-border data governance, stakeholder management, and deploying AI

systems in emerging market environments.

Market Surveillance Investigator — Data & AI Systems

Binance • Remote • March 2023 – December 2024

- **Managed systematic market surveillance across spot and derivatives markets for 150M+ active users**, processing 100+ daily alerts and delivering investigation reports under strict SLA compliance — demonstrating production workflow management at massive scale.
- **Pioneered AI-assisted investigation procedures achieving a 23% reduction in platform-wide fraudulent activity** through pattern recognition, systematic escalation workflows, and cross-functional collaboration with engineering and compliance teams.
- **Engineered custom Python scripts and SQL pipelines** for automated transaction analysis, anomaly detection, and large-scale data extraction — building production data engineering solutions for complex multi-dimensional investigation workflows.
- **Designed and delivered an end-to-end training program** for new investigators covering methodology, tooling, and evidence documentation — achieving 73% positive feedback rate and demonstrating team mentoring and knowledge transfer at scale.
- **Collaborated on optimizing Eventus trade surveillance system**, backtesting detection parameters and reducing false positive rate by 10% — applying evaluation framework thinking to production AI/ML detection systems.

Algorithmic Trader & Market Maker

Keyrock • Brussels, Belgium • May 2020 – May 2021

- Executed algorithmic trading strategies managing $10M+ daily liquidity across 4 exchanges, developing deep expertise in automated systems, real-time data processing, distributed architecture, and production risk management.
- Engineered real-time risk management systems including automated circuit breakers, dynamic spread adaptation, and position sizing — production systems requiring microsecond latency optimization and safety guardrails.

Earlier Experience

Digital Asset Investigator — Coldstorm Group (2018–2023): Forensic blockchain analysis, asset tracing, data governance, law enforcement collaboration. **Trading & Operations** — Secure Digital Markets (2019–2020): Institutional client delivery, OTC execution infrastructure.

PRODUCTION AGENTIC AI SYSTEMS

- **OpenClaw Multi-Agent Ecosystem** — 5+ agent agentic mesh with dynamic collaboration, tool integration, and autonomous task execution. Docker + cloud infrastructure + evaluation metrics + production monitoring.
- **VOLT Autonomous Trading Agent** — Multi-step reasoning, signal analysis, portfolio management, risk controls, and execution automation with ethical guardrails. Python + LLM orchestration.
- **RAG-Powered Enterprise Agents** — Production chatbots and voice agents with vector database retrieval, context-aware prompt engineering, and CRM tool integration for enterprise clients.
- **AI Lead Generation Pipeline** — Multi-agent pipeline: SerpAPI discovery → web scraping → LLM analysis & scoring → personalized output. 50+ qualified results/week.
- **Hybrid Compute Orchestration Engine** — Autonomous AI decision system routing workloads between compute modes based on real-time signals — demonstrating agentic reasoning with real-world constraints.

KEY ACHIEVEMENTS & IMPACT METRICS

- **5+ autonomous AI agents deployed in production** operating 24/7 in a collaborative agentic mesh
- **60–80% reduction in manual workload** for enterprise clients through agentic system deployment
- **5 enterprise clients** delivered end-to-end AI transformation with reusable agentic frameworks
- **23% reduction in fraudulent activity** at Binance (150M+ users) via AI-assisted investigation systems
- **73% positive feedback** on training program — demonstrates mentoring and knowledge transfer
- **$10M+ daily volume** managed with automated risk and safety systems across distributed exchanges

---

EDUCATION & CERTIFICATIONS

- **B.Comm, Business Technology Management** — Concordia University, Montreal (2012–2016)
- **Certificate in Software Development** — McGill University, Montreal (2017–2018)
- **AML, KYC & Compliance Certification** — Binance (2023)
- **Hummingbot Bootcamp: Market-Making Algorithm Development** (2022–2023)

THOUGHT LEADERSHIP & COMMUNITY

YouTube Channel (youtube.com/@MakirXBT) — Technical content on agentic AI architecture, autonomous systems design, and applied AI in financial technology. Demonstrates ability to communicate complex AI concepts and contribute to the broader AI community.

Bilingual Enterprise Delivery — Delivers AI strategy engagements, workshops, and stakeholder presentations in English and French across North American and European clients.
