MAKIR VOLCY

AI Forward Deployed Engineer — Agentic AI Solutions & Enterprise Delivery

End-to-End AI Deployment • LLM Agent Architecture • Enterprise Data Integration • Production Systems
Montreal, Canada | +1 (514) 602-5411 | volcy7@gmail.com LinkedIn: linkedin.com/in/makirvolcy | YouTube: youtube.com/@MakirXBT | Available: Remote / Hybrid / Travel

---

PROFESSIONAL SUMMARY

Senior Forward Deployed Engineer and AI Solutions Architect with 5+ years of hands-on experience delivering end-to-end production solutions across financial services, compliance, and enterprise technology. Builder of complex AI and LLM-powered intelligent agents and automated workflows — from architectural design through production deployment. Deep expertise in Python, prompt engineering, agentic orchestration frameworks, RAG systems, and conversational AI solutions within highly regulated industries (financial services, AML/KYC compliance, institutional trading). Proven entrepreneurial drive: founded two companies deploying AI-native operations and delivering bespoke agentic AI solutions to enterprise clients. Exceptional communicator who articulates complex technical concepts to both technical and non-technical stakeholders, with a track record leading technical engagements, mentoring team members, and driving fast, impactful delivery. Bilingual (English/French). Canadian citizen, based in Montreal.

CORE COMPETENCIES

AI/LLM Engineering & Agentic Frameworks LLM Integration (Claude API, GPT, Gemini), Agentic AI Architecture, AI Orchestration Frameworks (LangChain, LangGraph, AutoGen), Prompt Engineering, ReAct & Plan-and-Execute Patterns, Tool/API Integration, RAG Systems, Vector Databases, Conversational AI, Safety & Compliance Guardrails

Programming & Production Systems Python (Expert), JavaScript, TypeScript, SQL, REST APIs, Shell Scripting, Docker, Linux/Ubuntu, Git, CI/CD, Cloud Deployment (AWS, GCP), Production Monitoring, Scalable System Design, Code Quality & Best Practices

Data Modeling, Integration & Analytics Data Pipeline Design, ETL/ELT Workflows, SQL Database Design, API Integration Architecture, Data Processing & Transformation, Web Scraping, Data Analysis, Financial Modeling, Enterprise Data Environment Navigation

Enterprise Delivery & Technical Leadership End-to-End Solution Delivery, Technical Engagement Leadership, Client Requirements Translation, Bespoke Solution Architecture, Stakeholder Presentations, Workshop Facilitation, Team Mentoring, Cross-Functional Collaboration, Fast & Impactful Delivery

Regulated Industry Experience Financial Services AI Deployment, AML/KYC Compliance Systems, Market Surveillance & Fraud Detection, Institutional Trading Operations, Risk Management, Regulatory Reporting

Languages English (Native) | French (Native/Bilingual) | Spanish (Working Proficiency)

PROFESSIONAL EXPERIENCE

Founder & Senior AI Engineer — Agentic Solutions Delivery

Coldstorm AI • Montreal, Canada • January 2024 – Present

AI consulting and engineering practice delivering bespoke agentic AI solutions, intelligent automation, and production LLM deployments for enterprise and SMB clients.

- **Owned end-to-end technical delivery of complex AI solutions for 5 enterprise clients**, personally writing critical code, configuring systems, troubleshooting issues, and ensuring successful deployment with measurable business impact — reducing manual workload by 60–80% per engagement.
- **Designed, developed, and deployed production multi-agent systems (OpenClaw) with 5+ intelligent agents** orchestrating autonomous business operations — content creation, market intelligence, investor communications, and operational monitoring — using agentic frameworks with tool/API integration, multi-step reasoning, and production safety guardrails.
- **Engineered bespoke agentic AI solutions working directly with customers** to understand unique business requirements, designing custom intelligent agents that integrate seamlessly with existing client ecosystems including CRM platforms, scheduling systems, and communication tools via API integration.
- **Built and deployed conversational AI solutions** including production chatbots, AI voice agents, and intelligent receptionist systems with RAG-powered retrieval, vector database integration, and tool/function calling — handling lead qualification, appointment scheduling, and customer communication in client-facing production environments.
- **Implemented and enforced engineering best practices** across all deployed solutions — standardized evaluation frameworks measuring accuracy, safety, latency, and autonomous decision quality; Docker containerization; automated health monitoring; CI/CD pipelines; and comprehensive documentation.
- **Architected data integration pipelines** connecting AI systems with client data sources via REST APIs, web scraping, SQL databases, and third-party platform integrations — ensuring data is optimized, secure, and ready for AI applications within complex client environments.
- **Engineered VOLT — an autonomous AI trading agent** for prediction markets, implementing complex multi-step reasoning chains, real-time data processing, position management, portfolio risk controls, and automated execution — a production system requiring scalability, security, and compliance guardrails.
- **Led technical engagements and client presentations** translating complex AI capabilities into business-ready proposals, facilitating executive workshops, and mentoring client teams on AI adoption — demonstrating exceptional collaboration, communication, and presentation skills.

Founder & CEO — AI-Native Infrastructure & Operations

NRG Bloom Inc. • Montreal / Nigeria • 2023 – Present

- **Built and deployed AI-native operational systems** automating investor communications, content production, supply chain monitoring, and cross-border operations management — demonstrating entrepreneurship and a "get-things-done" delivery approach.
- **Designed a hybrid compute orchestration engine** dynamically routing workloads between compute modes based on real-time data signals — a production AI decision system requiring complex data modeling, integration, and real-time processing.
- **Architected $82M+ in financial models** using Python and advanced data analysis for investor presentations — demonstrating expertise in data modeling, processing, and analytics at enterprise scale.
- **Led cross-functional technical initiatives** across international operations in Nigeria, Kenya, and Colombia — navigating complex enterprise environments with multiple stakeholders, regulatory requirements, and data governance constraints.

Market Surveillance Investigator — Regulated Financial Services AI

Binance • Remote • March 2023 – December 2024

World's largest digital asset exchange — 150M+ active users, highly regulated financial services environment

- **Developed and deployed conversational AI-assisted investigation solutions within a highly regulated industry**, processing 100+ daily surveillance alerts across spot and derivatives markets with strict SLA compliance, regulatory reporting requirements, and audit trail documentation.
- **Pioneered systematic investigation methodologies achieving a 23% reduction in platform-wide fraudulent activity** — designing structured detection frameworks, escalation workflows, and cross-functional collaboration processes with engineering, compliance, and legal teams.
- **Engineered custom Python scripts and SQL pipelines** for automated transaction analysis, pattern detection, anomaly identification, and large-scale data extraction — building production data processing solutions within a complex enterprise data environment.
- **Designed and delivered an end-to-end training program** for new team members, mentoring on investigation methodology, tooling, evidence documentation, and reporting standards — achieving 73% positive feedback and demonstrating technical mentoring capabilities.
- **Collaborated on optimizing enterprise surveillance systems (Eventus)**, backtesting detection parameters and reducing false positive rates by 10% — hands-on production system optimization requiring data modeling, integration, and analytics expertise.

Algorithmic Trader & Market Maker — Production Automated Systems

Keyrock • Brussels, Belgium • May 2020 – May 2021

- **Managed end-to-end delivery of automated trading systems** executing $10M+ daily liquidity across 4 major exchanges — production systems requiring expert-level Python, real-time data processing, scalable architecture, and institutional-grade reliability.
- **Engineered real-time risk management systems** with automated circuit breakers, dynamic spread adaptation, and position sizing — production code requiring security, maintainability, scalability, and compliance with institutional risk governance frameworks.
- **Navigated complex enterprise data environments** integrating real-time market feeds, exchange APIs, portfolio databases, and risk monitoring dashboards into cohesive automated workflows.

Digital Asset Investigator — Data Analysis & Compliance

Coldstorm Group • Montreal • 2018 – 2023

- Led forensic blockchain analysis and asset tracing investigations (up to $500K), collaborating with law enforcement agencies — demonstrating expertise in complex data processing, pattern analysis, and regulated industry compliance.
- Built custom data analysis tools using Python for transaction graph analysis, wallet clustering, and evidence documentation — production tooling for compliance and legal stakeholders.

Earlier Experience

Trading & Operations — Secure Digital Markets (2019–2020): Institutional client onboarding, OTC execution, operational process design. **Financial Advisory** — National Bank of Canada (2020–2021): Client-facing financial advisory, portfolio management, regulated financial services delivery.

PRODUCTION AI SYSTEMS & PROJECTS

- **Multi-Agent Enterprise System (OpenClaw)** — 5+ agent production system with agentic orchestration, tool/API integration, autonomous task execution, Docker deployment, CI/CD, evaluation metrics, and automated health monitoring.
- **VOLT Autonomous Trading Agent** — Complex AI agent: multi-step reasoning, real-time data processing, position management, risk controls, execution automation, compliance guardrails. Python + LLM orchestration.
- **Enterprise Conversational AI Suite** — Production chatbots, voice agents, intelligent receptionist systems. RAG + vector databases + tool/function calling + CRM integration. 60–80% workload reduction for clients.
- **Automated Data Intelligence Pipeline** — End-to-end: SerpAPI → web scraping → data transformation → LLM analysis & scoring → structured output. 50+ results/week at production scale.
- **Hybrid Compute Orchestration Engine** — AI decision system routing workloads based on real-time data signals. Data modeling + integration + analytics + automated execution.

KEY ACHIEVEMENTS

- **5+ production AI agent systems** deployed and operating 24/7 with enterprise-grade monitoring
- **60–80% reduction in manual workload** across 5 enterprise client engagements
- **23% reduction in fraudulent activity** at Binance (150M+ users) via systematic methodology design
- **$10M+ daily automated trading volume** managed with production Python systems across 4 exchanges
- **$82M+ financial models** architected using Python and data analytics
- **73% positive feedback** on training program — demonstrates technical mentoring
- **Founded 2 companies** deploying AI-native production systems — proven entrepreneurial drive

---

EDUCATION & CERTIFICATIONS

- **B.Comm, Business Technology Management** — Concordia University, John Molson School of Business, Montreal (2012–2016)
- **Certificate in Software Development** — McGill University, Montreal (2017–2018)
- **AML, KYC & Compliance Certification** — Binance (2023)
- **Hummingbot Bootcamp: Market-Making Algorithm Development** (2022–2023)

THOUGHT LEADERSHIP

YouTube Channel (youtube.com/@MakirXBT) — Technical content on AI agent architecture, LLM deployment, and applied AI in financial technology — demonstrating exceptional ability to articulate complex technical concepts to diverse audiences.

Bilingual Technical Delivery — All client engagements, technical presentations, and stakeholder workshops delivered in both English and French.
